## INDEX METHODOLOGY

<sup>1</sup>All Asset performance measures every direct property investment in MSCI's index database comprised of all property sectors, ownership structures and interests.

<sup>2</sup>The Standing Investment index subset is based on completed and lettable properties only, often described as operating properties.

<sup>3</sup>The Non-Operating Investment index subset is constructed from those properties not included in the Standing Investments index subset. Non-operating Index base dates may differ as MSCI's client confidentiality rules suppress data based on small or skewed samples.

All three direct property indexes are computed at the building level and exclude properties held indirectly through investment funds, the impact of debt, fund management fees, taxation and cash. Numbers at sector level may not necessarily sum up to the 'Total' values due to rounding.

## PROPERTY SECTOR WEIGHTS

Sector weights are calculated by aggregating the capital value of individual assets across the main property types. This illustrates the composition of the index and whether there is a heavier concentration in a particular property sector thus having a greater impact on the overall index performance.
